

SpeedMan® - it doesn't get any greener

Void filling system paper made of 100% recycled paper

SpeedMan® paper – a green purist

SpeedMan® void filling system and cushioning paper consists of 100% recycled paper – nothing more and nothing less. Optical brightening agents or refining media which are harmful to health have been rigorously dispensed with in production. SpeedMan® - a brand distinguished for environmental protection.

100% Quality – New Sustainable Technology

SpeedMan® paper – just as the SpeedMan® itself – meets predetermined quality criteria and state-of-the-art technological standards. Closed water circuits, combined heat and power generation and heat recovery in production ensure that natural resources are managed in a sustainable manner.

Recycled paper beats virgin fibres by a wide margin!

Resolute use of recycled paper proves its worth at a number of levels: no overexploitation of our forests, water savings of approx. 60%, energy consumption lowered by approx. 60% and reduced CO₂ emissions – all factors that make virgin fibre paper look incredibly old.

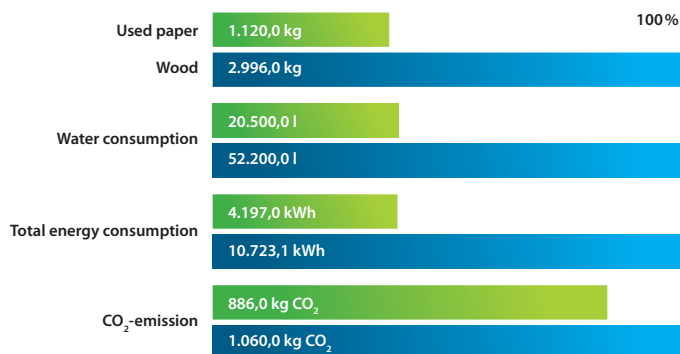

Unstoppably popular

With a market share of over 80% in the packaging sector (a trend that continues to increase), recycled paper is extremely popular and positively enhances the image of companies. SpeedMan® void filling system and cushioning paper is resolutely involved in this development. Sustainable environmental protection with SpeedMan® packaging paper – it doesn't get any greener.

Recycled paper vs. Virgin fibre paper

Consumption of resources concerning the production of 1 tonne of paper

Green all-round talent for a variety of application areas

Recycled paper also has no reason to keep a low profile when it comes to quality. This is one reason why products made of used paper can be found in practically every area of daily life (e.g. daily newspapers, hygienic tissue paper, pizza cartons or cardboard hamburger boxes).
